

.net Developer (Full Stack)

Overview

The growing development team at Mountain Warehouse is split into small teams, each looking after a different set of applications and using a Kanban approach to prioritisation.

We are a collaborative team with a strong culture of code review, occasional usage of pair programming, lots of unit tests. We're keen to write code following best practice and to continuously find ways that we can be even better. The work is a mixture of green-field and legacy work (much like any other mature organisation) mostly using C#, SQL Server & React – however, the microservices approach allows us to alter the technology as appropriate.

We are looking for developers to join customer-facing and internal tooling teams.

Essential skills / experience.

- C# in a commercial environment.
- Javascript / Typescript in a commercial environment.
- Ability to solve problems in code quickly and simply.
- Solid understanding of how http and network communication works .
- Excellent communication skills.
- Ability to produce initial results rapidly and iterate based upon feedback.

This is a selection of what we're using

Let us know what you have experience of, we can train in the rest.

- Continuous Deployment with Jenkins.
- Test Driven Development.
- RabbitMQ / MassTransit.
- Microservices architecture.
- Entity Framework.
- MVC.
- MongoDB / MongoDB Realm.
- React.
- ReactNative.
- RESTful API design / Web.API.
- Azure.
- Docker & Kubernetes.
- .net Core.
- GitFlow.
- Dependency Injection with AutoFac, Unity and StructureMap.
- SQL Server stored procedures.

Company culture

- The department is light on meetings – most of your time will be working on projects.
- There is dedicated training time & budget to expand your skills.
- As a privately-owned company we tend to be fast-moving, and as we 're profitable and growing we tend to be able to afford the tools and hardware we need.
- The IT department is over the road from the rest of head office. We have a large, modern open-space environment that's been recently refurbished.
- Very fun and social team, lots of group outings and activities to partake in .

What we offer

- Training budget after 1st year.
- Two hackathon events a year.
- Regular lunch and learn events.
- Dedicated time for self-improvement, spike tests, blog writing, etc.

Location

Like most companies we shifted to working-from-home pattern during the UK lockdown. As a department, this has worked out fine for us and while we have had use of the office for a few months, most of the department has opted to remain at home. This means that when this is all over we will have a blended team that has both remote and in-office members. We're committed to making this work and ensuring that remote workers are first-class citizens in the department.
