

.net Developer – Intern (YINI)

Overview

Mountain Warehouse is a **profitable, privately-owned**, and **growing** business. The development department is focussed on getting things done rather than predicting when things will get done.

What does this mean? It means that:

- Exciting changes in the business can appear at short notice.
- If we need something and it's reasonably-priced, we can usually just get it.
- You can suggest ideas that can change the business.
- Developers should be light on meetings.

The department at Mountain Warehouse is split into many small teams responsible for the applications relevant to an area of the business (i.e. product-focussed teams) . We work to improve the eCommerce offering internationally, to improve our tools & processes for buying, merchandising, retail operations, logistics, customer service, finance, etc ...

Development process

At Mountain Warehouse we believe that developers should be connected to the things that they build – as such, developers get to spend time with the business owners on a regular basis and specifications are built iteratively based upon feedback. We try to take the time to get things right rather than rushing on to the next thing. All code is peer reviewed and TDD is promoted as much as possible.

A selection of the technologies we use

- C# (.net Core and .net Framework)
- TypeScript / JavaScript
- SQL Server
- RabbitMQ / MassTransit
- Entity Framework
- Microservices architecture
- Jenkins / Continuous Delivery
- Docker
- Test Driven Development.
- MVC.
- MongoDB / MongoDB Realm.
- React.
- ReactNative.
- RESTful API design.
- Docker & Kubernetes in Azure
- GitFlow

Some teams are mostly considered “backend” but most teams are working as full-stack. As such, we would need experience of a modern typed language (C#, Java, TypeScript) and ideally JavaScript.

Support You Will Receive

We are putting together a training pathway for all new junior starters – so expect your first few months to involve a lot of internal & external workshops and a decent amount of study time. We trust this will quickly give you the knowledge you need to be working on our production systems .

While we would like you to experience at least two different teams while at Mountain Warehouse, you will have a dedicated mentor throughout your time at the company.

What we offer

- Flexibility
 - Remote-first with an office in central London if you need it.
 - 10-5 core hours, 37.5 across the week .
 - Options to work for long periods in Germany or Poland. Other countries negotiable. Short term “digital nomad” trips permitted by default.
- Learning
 - Internal training courses to get you up to speed .
 - Two hackathon events a year.
 - Additional external training if appropriate.
 - 10 days of dedicated time for self-improvement, spike tests, blog writing, etc.
- Work/life balance
 - No mandatory overtime.
 - Unpaid time off is negotiable.
- Sociability
 - 6 in-person department events a year. Travel and accommodation are provided if you live outside London. Virtual alternative provided if you are unable to travel.
 - 6 virtual department events a year.
 - Team get togethers are encouraged .
 - 2 company parties a year.
- 50% off Mountain Warehouse, Animal and other brands in the group.
